## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 9, 10, 13-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Oliveri [US 3,797,223].

Oliveri disclose an alarm clock [figure 1] comprising:

a base member [3] having an external side, an internal side and an aperture [5'] extending between the external side and the internal side;

a resilient member [8] positioned within the internal side and across the aperture;

a fixed member [bottom plate holding bottom contact 6] positioned within the internal side;

a bias member [7] connected to the movable member to bias the movable member in contact with the fixed member;

a button member [5] positioned within the aperture wherein the button reciprocates by pressure to break contact between the movable member and the fixed member; and

a signal circuit [electric alarm device 4] in communication with the movable member and the fixed member wherein the signal circuit sends at least one signal in response to the contact between the movable member and the fixed member.

Regarding claims 20-23, the method steps are inherent to the apparatus structures.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-8, 11, 12, 18, 19 and 24-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oliveri [US 3,797,223] in view of Rund [US 5,089,998].

Oliveri discloses the claimed invention except for the electronic alarm device comprises a signal circuit includes a plurality of switches.

Rund discloses an electronic alarm clock comprising a plurality of switches one of snooze, one of light and one of alarm [figures 1 and 8].

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to use the switch design of Rund with Oliveri alarm clock for the purpose of providing multiple alarming functions.

Regarding claims 24-25, the method steps are necessitated by the apparatus structures.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Aubert [US 0,050,140]; Jetter [US 4,352,170]; Sapper [US 3,604,200]; M. H. Kern [US 1,148,969]; Narita [US 4,379,339].
